PROFILE

.NET Developer skilled in web applications and backend systems, passionate about efficient development and problem-solving. Strong in teamwork and communication, ensuring smooth collaboration and project success.

SKILLS

- **Languages:** C#, SQL, JavaScript, TypeScript, Python (Basics)
- **Frameworks:** .NET 8, ASP.NET Core, ASP.NET MVC, ASP.NET Core Web API, Entity Framework Core, Angular 17 (Basics), React.js (Basics)
- **Architecture & Design Patterns:** Microservices Architecture, Clean Architecture, RESTful APIs, Dependency Injection, Repository Pattern, Factory Pattern, Transactional Outbox Pattern
- **Cloud & DevOps:** Microsoft Azure, Azure DevOps, Azure Data Factory, Azure Key Vault, Azure Blob Storage, Azure Service Bus, Azure Event Hubs, Azure Kubernetes Service (AKS), Docker, Helm, CI/CD Pipelines, Terraform
- **Databases & Search:** SQL Server, PostgreSQL, Azure Cosmos DB, Azure SQL, Elasticsearch, Databricks SQL
- **Monitoring & Observability:** Serilog, OpenTelemetry, New Relic
- **Testing & Documentation:** xUnit, NUnit, FakeItEasy, Testcontainers, Swagger/OpenAPI, Postman
- **Tools:** Visual Studio, VS Code, SQL Server Management Studio (SSMS), pgAdmin, Git, Azure Portal, Jira, Rally

EXPERIENCE

TheRapidHire Pvt Ltd

Indore, India

1. Sr .NET Developer

Dec 2024 – Present

❖ Cube Content Access Service

- Technologies: .NET 8, Elasticsearch, Cosmos DB, Azure Event Hubs, Terraform, AKS, Polly, OpenXML, IronPDF
- Developed content access and entitlement services for publications, books, alerts, and multimedia content.
- Refactored export framework supporting Excel and PDF generation using a unified data model.
- Implemented event-driven synchronization using Azure Event Hubs consumer groups.
- Integrated Azure Workload Identity (OIDC) for secure authentication with Azure resources.
- Optimized Elasticsearch queries and indexing strategies for content discovery and retrieval.

❖ Oden Notice Generation API

- Technologies: .NET 8, PostgreSQL, EF Core 8, Auth0, OpenTelemetry, Docker
- Developed insurance notice generation APIs supporting multi-tenant and state-specific compliance requirements.
- Implemented tenant isolation using EF Core Global Query Filters and SaveChanges Interceptors.
- Designed PostgreSQL dual-schema architecture for operational and configuration data separation.
- Implemented Transactional Outbox Pattern for reliable event publishing and processing.
- Integrated Auth0-based authentication and tenant-aware authorization mechanisms.
- Developed observability using Open Telemetry, Prometheus, Serilog, and New Relic.
- Automated database migrations and deployment workflows through CI/CD pipelines.

❖ Oden PDF Generation Platform

- Technologies: .NET 8, Azure Service Bus, Event Hubs, SignalR, PostgreSQL
- Developed asynchronous PDF generation platform using microservices architecture.
- Built real-time job tracking and notifications using SignalR.
- Developed PDF rendering workflows using Scriban templates and IronPDF.

- Implemented secure document storage using Azure Blob Storage.

2. Software Developer (Data Engineer)

- Developed and optimized SQL Server stored procedures, ensuring efficient data management and integrity.
- Built backend logic in C# for ETL workflows and implemented automated data cleanup in ASP.NET MVC.
- Worked on cloud data transformation using Azure Data Factory, Linked Services, and Databricks.
- Integrated on-premise and cloud-based ETL solutions, streamlining data migration processes.
- Designed and implemented Windows Services for automating background data processing tasks.
- Collaborated with US-based clients, participated in Scrum meetings, and managed tasks using Rally.

Revalsys Technology

Hyderabad, India

Jr Software Developer

Sep 2023 – Nov 2024

- Built web apps using ASP.NET, ADO.NET, and Web API, boosting speed and user experience.
- Created a Windows Service to auto-process bills, improving accuracy and removing manual work.
- Executed thorough code testing, increasing coverage, identifying defects early, and minimizing production issues.
- Improved SQL queries, stored procedures, and database speed while updating UI as per client needs.
- Implemented Dependency Injection and Factory Design Pattern for better code maintainability and scalability.
- Collaborated with teams, analyzed business requirements, and managed sprints using Jira for project tracking.

PROJECTS

[BloodDoner API](#)

- BloodBank API manages donor registration, login, and secure access with authentication.
- Supports donor search, data handling with SQL Server stored procedures, and role-based access.
- Built with .NET 8, using Factory Design Pattern, Dependency Injection, and JWT for security and scalability.

[Portfolio](#)

- **React.js Integration:** Built a dynamic and interactive UI using a component-based architecture.
- **Modular Codebase:** Organized structure with JSON-based data storage for easy scalability.
- **Responsive Design:** Used **Tailwind CSS** for a seamless experience across all devices.
- **Email Functionality:** Integrated **EmailJS** for contact form submissions without a backend.

EDUCATION

Manipal University, Sikkim

Master of Computer Applications (MCA Online) — Pursuing

2025 – Present

Anand Niketan Collage

Bachelor of Science

Anandwan, Warora, India

2019 – 2022
